

Buleu Mihai Andrei și Ghiran Sara-Cristina

Enunț proiect:

Implementarea unui sistem informatic destinat gestiunii activităților dintr-un spital.

Aplicația poate fi accesată pe baza unui sistem de autentificare/login, de către mai multe tipuri de utilizatori. Pentru fiecare tip de utilizator avem informațiile următoare: nume, prenume, mail, număr de telefon, data nașterii.

Utilizatorul de tip administrator poate crea, vizualiza, șterge și modifica informații în baza de date despre conturile utilizatorilor.

Utilizatorul de tip doctor poate vedea informațiile pacienților, atât date personale cât și istoricul medical dat de fișa medicală. Poate să vadă programările. Poate crea și vizualiza prescripțiile unui pacient, crearea este pentru consultația curentă. Se va completa consultația curentă în fișa medicală cu următoarele date: diagnosticul, prescripția și simptomele. Pentru fiecare consultație se va genera costul. Se va tipări prescripția care va conține informațiile rezultate din consultație, precum și medicamentul/medicamentele, doza zilnică și durata tratamentului (în format pdf).

Utilizatorul de tip asistent poate vizualiza datele pacientului, dar doar cele personale, nu și istoricul medical. Va putea crea, șterge, vizualiza și aproba programările unui pacient. Se va trimite un mesaj prin mail/sms dacă cererea a fost aprobată sau nu. Se poate vizualiza și prescripția unui pacient. Printare factura consultației (format pdf).

Utilizatorul de pacient își poate crea un cont. Își poate vizualiza programările și prescripțiile (rezultatele de la consultație + întregul istoric medical (fișa medicală)). Mai poate vizualiza factura pentru consultație și solicita crearea unei programări.

```

The diagram illustrates the workflow of a user management system across three swimlanes: Utilizator, Client, and Server. The process begins with the Utilizator selecting the admin panel, which triggers the Client to prepare a request for all user information. This request is sent to the Server, which executes a database query and returns the user information to the Client. The Client then displays this information to the Utilizator. From the Utilizator's perspective, several actions are possible: selecting a user, deleting a user, adding a new user, or editing an existing user. Each action involves a series of steps: preparing the request, sending it to the Server, validating the data, executing the database operation (delete, insert, or update), and receiving a success or failure message. The Client then displays these messages to the Utilizator. The diagram uses standard UML notation, including rectangles for use cases, diamonds for decisions, and arrows for the flow of control and data. Swimlanes are separated by vertical lines, and the flow of the process is indicated by numbered steps and labeled arrows.

Descrierea Aplicatiei

A screenshot of a login and registration screen. It features a blue gradient background. At the top, there are two white input fields: 'Type username...' and 'Type password...'. Below these is a blue 'Login' button. At the bottom, there is a link that says 'Create Account'.

La deschiderea aplicatiei de catre clien, acesta va fi prezentat cu un ecran de logare, unde se va introduce numele si parola asignate. Pentru pacientii noi veniti, exista optiunea de creare a unui cont nou odata cu apasarea butonuli “Create

Account”. Aici se vor introduce date precum nume, prenume, parola, numar de telefon, email si data nasterii, apoi se v-a apasa butonu “Create”

A screenshot of a 'Create Account' screen. It has a blue gradient background. On the left, there are seven white input fields stacked vertically: 'Introdu numele de utilizator...', 'Introdu parola...', 'Introdu nume...', 'Introdu prenumele...', 'Introdu numarul de telefon...', 'Introdu adresa de email...', and 'Introdu data nasterii...'. On the right, there is a blue 'Create' button and a link that says 'Go back'.

Odata logat, utilizatorul v-a fi prezentat cu un ecran care l descrie profilul. In aceasta interfata se poate reveni la ecranul de logare apasand butonul “Back”. De asemenea sunt introduse butoane de navigare numite “Next” si “Previous”.

Un utilizator de tip administrator are acces la interfata de “User Management” unde poate vedea toti utilizatorii din baza de date. Pentru fiecare utilizator exista butonul de “Delete” care sterge utilizatorul din baza de date.

De asemenea exista butonul de “Edit” care permite editarea informatiilor unui utilizator.

Poate sa isi vada programarile si statusul lor precum si istoricul medical.

Solicitare creare programare

Poate solicita o crearea unei programare: permite pacientului sa aleaga un medic si o data pentru programare. Datele sunt colectate în PacientGUI, trimise prin Request către PatientHandler, care apeleaza repository-ul ProgramareRepository, astfel datele sunt introduse in baza de date.
